EDUCATION

Vellore Institute of Technology — Bhopal, Madhya Pradesh

Bachelor of Technology in Computer Science and Engineering ***CGPA****: 9.05* — August 2023 – April 2027

SKILLS

Languages & Technologies: Java, JavaScript, SQL (PostgreSQL), MongoDB, React.js, Node.js, Express.js
Frameworks & Tools: Docker, Kubernetes, Git, GitHub, Linux, Pandas, NumPy, Matplotlib
Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), REST APIs, Database Management Systems (DBMS), CI/CD, Agile Methodologies, Data Analysis, Data Visualization

PROJECTS

AutoFlow Intelligent Workflow Automation Platform | React.js, Node.js, Express.js, PostgreSQL, JWT — GitHub

- Engineered AutoFlow to automate repetitive business workflows by converting natural-language requests into structured multi-step execution plans.
- Built a full-stack React, Node.js, Express.js, PostgreSQL, and JWT-based platform with 6+ agent modules for planning, task execution, logging, analytics, and third-party integration hooks.
- Enabled 5+ stage workflow orchestration, 6+ service-ready integrations, real-time execution tracking, and an analytics dashboard covering 5 executive KPIs, 4 agent metrics, and 4 failure categories.

Kubernetes Monitoring Dashboard | React.js, Node.js, Express.js, MongoDB, Docker, Kubernetes — GitHub

- Designed **LiveOps**, a real-time monitoring dashboard to track 4 core services: frontend, backend, database, and APIs in a cloud-native application.
- Integrated React.js, Node.js, Express.js, MongoDB, Docker, and Kubernetes with Server-Sent Events to stream 8+ live infrastructure metrics including API latency, uptime, CPU usage, memory usage, request count, and database health.
- Enhanced application observability through automatic real-time health updates, enabling faster identification of backend and database connectivity issues.

Stock Market Backtesting Engine in Python | Python, Pandas, NumPy, Streamlit — Live Demo

- Developed a multi-asset backtesting engine in Python with a plugin architecture supporting 4 trading strategies and modular strategy extensions.
- Created realistic portfolio simulation with trading costs (commission, slippage) and cost-basis tracking, producing accurate profit/loss and risk performance metrics for each strategy.
- Deployed an interactive Streamlit dashboard with 10+ visualizations and a buy-and-hold benchmark, making backtest results usable without touching code.

EXPERIENCE

Siemens Industry Software (India) Pvt. Ltd. — May 2025 – June 2025

Student Intern — Noida, Uttar Pradesh

- Automated routine analysis tasks using Python and Bash scripts, reducing manual effort and improving workflow efficiency.
- Contributed to monitoring scripts that tracked system performance metrics and generated real-time alerts, helping reduce troubleshooting time by 50%.

Honda Cars India Ltd. — May 2026 – June 2026

Software Intern — Greater Noida, Uttar Pradesh

- Supported efficient issue tracking and customer problem management for the Honda Connect application, and resolved an average of 20+ tickets daily.
- Worked with the Honda Connect CRM system to analyze customer issues and assist the development team in resolving application tickets.

EXTRACURRICULAR

Japanese Language: Currently learning Japanese (Beginner Level – JLPT N5).
Operational Lead, Software Development Club, VIT Bhopal: Coordinated operations for 5+ technical events and workshops, collaborated with 30+ student volunteers, and supported the execution of coding and developer community initiatives.

CERTIFICATIONS

IBM DevOps, Agile, and Design Thinking Certification
Ethnus - AWS Certified Machine Learning Engineer - Associate Course
